

The **LIEBHERR LTM-1400-7.1** mobile crane with a maximum lifting capacity of **400 tons** has a telescopic boom **60 meters** long. The mobile crane has a **94 meter** long lattice extension and can be used as a tower crane! But unlike standard tower cranes, its lifting characteristics are several tens of times higher!

Despite its size, the mobile crane is more maneuverable than an ordinary scow! All its **7 axles** are steered and steered! Adjustable ride height and suspension stiffness! Like all **LIEBHERR** mobile cranes, it has a crab travel and a turn on a small radius!

The complete supporting contour of the mobile crane is only **9.5 m x 10.0 m**. The working area of the mobile crane is **360 degrees**! The mobile crane has many speed modes for each operation, which allows it to be optimally used for various types of work. The most modern mobile crane computer fully controls all crane parameters, including support pressure and wind speed!

The mobile crane is provided only after the preliminary departure of the engineer of our company to the work site, which guarantees 100% fulfillment of the assigned tasks!
